

Incident ID: INC-001  
Timestamp: 2026-06-02 09:07  
Application: Payment Service  
Environment: UAT  
Severity: P2  
Title: Expired SSL certificate  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Payment Service] SSLHandshakeException: Operation failed at service endpoint.  
CorrelationId=REQ00001  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: Expired SSL certificate.  
Resolution: Renewed SSL certificate, updated TLS secret, reloaded ingress, verified HTTPS.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-002  
Playbook ID: PB-002  
Incident ID: INC-002  
Timestamp: 2026-06-03 10:14  
Application: Reporting Service  
Environment: Production  
Severity: P3  
Title: Expired OAuth token  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Reporting Service] HTTP 401: Operation failed at service endpoint.  
CorrelationId=REQ00002  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: Expired OAuth token.  
Resolution: Rotated OAuth secret, updated vault, restarted pods, validated auth.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-003  
Playbook ID: PB-003  
Incident ID: INC-003  
Timestamp: 2026-06-04 11:21  
Application: Billing Service  
Environment: Production  
Severity: P4  
Title: NGINX upload limit  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Billing Service] HTTP 413: Operation failed at service endpoint.  
CorrelationId=REQ00003  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: NGINX upload limit.  
Resolution: Raised upload limit, redeployed ingress, validated uploads.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-004  
Playbook ID: PB-004  
Incident ID: INC-004  
Timestamp: 2026-06-05 12:28  
Application: Reporting Service  
Environment: Production  
Severity: P1  
Title: Kafka broker overload  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Reporting Service] Kafka Timeout: Operation failed at service endpoint.  
CorrelationId=REQ00004  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: Kafka broker overload.  
Resolution: Rebalanced partitions, scaled brokers/consumers, cleared lag.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-005  
Playbook ID: PB-005  
Incident ID: INC-005  
Timestamp: 2026-06-06 13:35  
Application: Gateway API  
Environment: Production  
Severity: P2  
Title: Redis cache saturation  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Gateway API] HTTP 503: Operation failed at service endpoint.

CorrelationId=REQ000005  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: Redis cache saturation.  
Resolution: Cleared stale cache, increased memory, warmed cache.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-006  
Playbook ID: PB-006  
Incident ID: INC-006  
Timestamp: 2026-06-07 14:42  
Application: Billing Service  
Environment: UAT  
Severity: P3  
Title: Kubernetes CrashLoopBackOff  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Billing Service] CrashLoopBackOff: Operation failed at service endpoint.  
CorrelationId=REQ000006  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: Kubernetes CrashLoopBackOff.  
Resolution: Fixed config, redeployed pods, verified stability.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-007  
Playbook ID: PB-007  
Incident ID: INC-007  
Timestamp: 2026-06-08 15:49  
Application: Notification Service  
Environment: Production  
Severity: P4  
Title: Expired OAuth token  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Notification Service] HTTP 401: Operation failed at service endpoint.  
CorrelationId=REQ000007  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: Expired OAuth token.  
Resolution: Rotated OAuth secret, updated vault, restarted pods, validated auth.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-008  
Playbook ID: PB-008  
Incident ID: INC-008  
Timestamp: 2026-06-09 16:56  
Application: Search Service  
Environment: UAT  
Severity: P1  
Title: NGINX upload limit  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Search Service] HTTP 413: Operation failed at service endpoint.  
CorrelationId=REQ000008  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: NGINX upload limit.  
Resolution: Raised upload limit, redeployed ingress, validated uploads.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-009  
Playbook ID: PB-009  
Incident ID: INC-009  
Timestamp: 2026-06-10 17:03  
Application: Payment Service  
Environment: UAT  
Severity: P2  
Title: Kafka broker overload  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Payment Service] Kafka Timeout: Operation failed at service endpoint.  
CorrelationId=REQ000009  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: Kafka broker overload.  
Resolution: Rebalanced partitions, scaled brokers/consumers, cleared lag.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-010  
Playbook ID: PB-010  
Incident ID: INC-010

Timestamp: 2026-06-11 18:10  
Application: Auth Service  
Environment: UAT  
Severity: P3  
Title: Spark data skew  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Auth Service] ExecutorLostFailure: Operation failed at service endpoint.  
CorrelationId=REQ00010  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: Spark data skew.  
Resolution: Repartitioned data and enabled AQE.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-011  
Playbook ID: PB-011  
Incident ID: INC-011  
Timestamp: 2026-06-12 19:17  
Application: Inventory API  
Environment: Production  
Severity: P4  
Title: NGINX upload limit  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Inventory API] HTTP 413: Operation failed at service endpoint.  
CorrelationId=REQ00011  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: NGINX upload limit.  
Resolution: Raised upload limit, redeployed ingress, validated uploads.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-012  
Playbook ID: PB-012  
Incident ID: INC-012  
Timestamp: 2026-06-13 08:24  
Application: Order Service  
Environment: Production  
Severity: P1  
Title: Database connection pool exhausted  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Order Service] HTTP 500: Operation failed at service endpoint.  
CorrelationId=REQ00012  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: Database connection pool exhausted.  
Resolution: Killed blocked sessions, tuned pool, optimized queries.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-013  
Playbook ID: PB-013  
Incident ID: INC-013  
Timestamp: 2026-06-14 09:31  
Application: Inventory API  
Environment: Production  
Severity: P2  
Title: Spark data skew  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Inventory API] ExecutorLostFailure: Operation failed at service endpoint.  
CorrelationId=REQ00013  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: Spark data skew.  
Resolution: Repartitioned data and enabled AQE.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-014  
Playbook ID: PB-014  
Incident ID: INC-014  
Timestamp: 2026-06-15 10:38  
Application: Order Service  
Environment: UAT  
Severity: P3  
Title: Disk full  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Order Service] No space left on device: Operation failed at service endpoint.  
CorrelationId=REQ00014

Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: Disk full.  
Resolution: Cleaned logs, expanded volume, enabled rotation.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-015  
Playbook ID: PB-015  
Incident ID: INC-015  
Timestamp: 2026-06-16 11:45  
Application: Payment Service  
Environment: Production  
Severity: P4  
Title: NGINX upload limit  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Payment Service] HTTP 413: Operation failed at service endpoint.  
CorrelationId=REQ00015  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: NGINX upload limit.  
Resolution: Raised upload limit, redeployed ingress, validated uploads.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-016  
Playbook ID: PB-016  
Incident ID: INC-016  
Timestamp: 2026-06-17 12:52  
Application: Auth Service  
Environment: Production  
Severity: P1  
Title: Expired OAuth token  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Auth Service] HTTP 401: Operation failed at service endpoint.  
CorrelationId=REQ00016  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: Expired OAuth token.  
Resolution: Rotated OAuth secret, updated vault, restarted pods, validated auth.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-017  
Playbook ID: PB-017  
Incident ID: INC-017  
Timestamp: 2026-06-18 13:59  
Application: Order Service  
Environment: Production  
Severity: P2  
Title: Kafka broker overload  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Order Service] Kafka Timeout: Operation failed at service endpoint.  
CorrelationId=REQ00017  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: Kafka broker overload.  
Resolution: Rebalanced partitions, scaled brokers/consumers, cleared lag.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-018  
Playbook ID: PB-018  
Incident ID: INC-018  
Timestamp: 2026-06-19 14:06  
Application: Billing Service  
Environment: Production  
Severity: P3  
Title: Databricks cluster auto-terminated  
Symptoms: Elevated latency, customer complaints, alerts fired.  
Sample Log:  
ERROR [Billing Service] Job Failed: Operation failed at service endpoint.  
CorrelationId=REQ00018  
Business Impact: Transactions affected for critical users.  
Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.  
Root Cause: Databricks cluster auto-terminated.  
Resolution: Restarted cluster, adjusted auto-termination, reran jobs.  
Preventive Actions: Add monitoring, automate validation, capacity review.  
Known Issue ID: KI-019  
Playbook ID: PB-019  
Incident ID: INC-019  
Timestamp: 2026-06-20 15:13

Application: Reporting Service

Environment: Production

Severity: P4

Title: Disk full

Symptoms: Elevated latency, customer complaints, alerts fired.

Sample Log:

ERROR [Reporting Service] No space left on device: Operation failed at service endpoint.

CorrelationId=REQ00019

Business Impact: Transactions affected for critical users.

Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.

Root Cause: Disk full.

Resolution: Cleaned logs, expanded volume, enabled rotation.

Preventive Actions: Add monitoring, automate validation, capacity review.

Known Issue ID: KI-020

Playbook ID: PB-020

Incident ID: INC-020

Timestamp: 2026-06-21 16:20

Application: Reporting Service

Environment: Production

Severity: P1

Title: Disk full

Symptoms: Elevated latency, customer complaints, alerts fired.

Sample Log:

ERROR [Reporting Service] No space left on device: Operation failed at service endpoint.

CorrelationId=REQ00020

Business Impact: Transactions affected for critical users.

Investigation: Reviewed logs, metrics, Kubernetes events, dashboards.

Root Cause: Disk full.

Resolution: Cleaned logs, expanded volume, enabled rotation.

Preventive Actions: Add monitoring, automate validation, capacity review.

Known Issue ID: KI-021

Playbook ID: PB-001
